

Executive Summary: Order Analytics Dashboard

Project Overview

This data analytics project analyzes 1,000 orders to uncover key business insights across revenue, product performance, delivery efficiency, and customer behavior. The dashboard provides actionable intelligence for strategic decision-making.

Key Performance Indicators (KPIs)

- Metric Value Insight :-
 1. Total Orders 1,000 Healthy order volume indicating strong market presence
 2. Total Revenue ₹6,74,634 Solid revenue generation across all product categories
 3. Average Delivery Time 5.52 days Moderate delivery speed — opportunity for optimization
 4. Avg. Customer Spending ₹3,290.90 Strong per-customer value — indicates good product mix and pricing
- Revenue Breakdown
 - Top 5 Products by Revenue:-
 1. Delictus Gift Pack — Highest revenue generator
 2. Digimission Pack — Strong performer
 3. Malores Box — Consistent contributor
 4. Provident Pack — Reliable revenue stream
 5. Qiu Gift — Solid performer

Insight: Gift packs dominate the top 5, suggesting gifting is a key driver. Consider expanding the gift pack line.

- Revenue by Category
 1. Cake — Highest revenue category
 2. Sweets — Strong second
 3. Soft Toys — Consistent performer
 4. Plants — Niche but growing
 5. Colors — Seasonal driver (likely Holi-related)
 6. Raksha Bandhan — Occasion-specific spike

Insight: Cakes and sweets are the backbone. Raksha Bandhan and Colors show occasion-based revenue bursts.

- Revenue by Month

Insight: Look for peak months (likely around festive seasons like Diwali, Holi, Raksha Bandhan, and Valentine's Day). Off-peak months would benefit from targeted promotions.

- Revenue by Occasion

Your occasions data shows revenue mapped to occasions like:

- Raksha Bandhan
- Valentine's Day
- Likely Holi, Diwali, Anniversaries, Birthdays

Insight: Occasion-based marketing is clearly working. Bundling products by occasion (e.g., "Raksha Bandhan Combo") could increase average order value.

- Revenue by City

Insight: Revenue concentration in specific cities indicates where to focus marketing spend. Consider expansion into underserved cities.

Strategic Recommendations

1. Optimize Delivery Speed

- Current average: 5.52 days
- Target: 3-4 days for competitive advantage
- Action: Partner with faster logistics providers in key cities

2. Boost Customer Spending

- Current avg: ₹3,290.90
- Action: Introduce bundling (e.g., "Cake + Soft Toy + Sweets" combo at 10% discount)
- Action: Loyalty program for repeat buyers

3. Capitalize on Occasion-Driven Demand

- Raksha Bandhan, Valentine's Day, and Holi show clear spikes
- Action: Start marketing campaigns 45 days in advance
- Action: Create occasion-specific landing pages

4. Expand Product Portfolio

- Gift packs are top performers → launch 5-10 new gift pack variants
- Explore premium category for high-value customers

5. Geographical Expansion

- Top cities already performing well → increase ad spend there
- Identify potential new cities with similar demographics

KPI	Value	Business Impact
▪ Total Orders	1,000	Strong order volume indicates healthy customer demand and effective market reach.
▪ Total Revenue	₹ 6,74,634.00	Consistent revenue generation across multiple product lines. Room for growth through upselling and cross-selling.
▪ Average Delivery Time	5.52 days	Currently moderate. Reducing this to 3 - 4 days could significantly boost customer satisfaction and repeat orders.

KPI	Calculation	Why It Matters
▪ Total Orders	Count of all unique Order IDs	Measures overall sales volume. Higher = better brand penetration.
▪ Total Revenue	Sum of all order revenues	The bottom line. Shows financial health of the business.
▪ Average Delivery Time	AVG(Delivery_Date - Order_Date)	Customer satisfaction metric. Faster delivery = happier customers + more repeat buys.

Conclusion

The business is performing well with ₹6.74 lakhs in revenue from 1,000 orders, driven primarily by gift packs, cakes, and occasion-based purchases. With a few strategic interventions — particularly in delivery optimization, customer retention, and occasion-based marketing — the business can scale revenue significantly in the next cycle.
